

SSL

SDS.Dental™ supports industry-standard **Secure Sockets Layer (SSL) certificate security**.

You can always connect to SDS.Dental™ via **http://**, but we recommend that you connect via **https://** so that your data is encrypted, and nobody in the middle can "listen in".

Benefits of SSL include:

- Server authentication—our Digital Certificates are obtained from trusted Certificate Authorities
- Data encryption—ensuring private exchange between your browser and our servers
- Confidence—know that nobody in the middle is listening in

In addition to SSL, SDS.Dental™ signs all native code with industry-standard **Code Signing Certificates**. This protects and reassures you that the integrity of the code being downloaded from our servers is intact. This means that it has not been tampered with or altered in transit. We take responsibility for our code by signing it with our name.
